Remote Access
6300-CX, 6310-DX, 6330-MX, and 6350-SR

Remote Access

Skill Level: *Moderate* (assumes familiarity with SSH sessions)

Goal

To SSH into an Accelerated device remotely, using the terminal available via Accelerated View and a publicly reachable IP address.

> ❗ If your device does not have a publicly reachable IP address, you can still leverage the [Terminal on Unit via the Accelerated View IPSec Tunnel](#).

Setup

Devices can be managed over SSH so long as the external zone is enabled for remote SSH and web UI access.

> ❗ The default credentials are:
>
> Username: *root*
>
> Password: *default*
>
> **NOTE:** The configuration steps outlined below will open external access to your Accelerated device. It is imperative that the default password is changed to a more secure key to prevent intrusions.

Sample Configuration

Open the configuration profile of the device and expand *Services*. Under *Web Administration*, expand *Access Control List* and *Zones* to create a new entry for "External." Repeat this process for the *Zones* associated with the *Access Control List* under the *SSH* menu heading. The following steps reflect the sample setup indicated in the screenshot below:

1. Under *Services -> Web Administration -> Access Control List*, expand *Zones*.
2. Add a new entry for "External."
3. Under *Services -> SSH -> Access Control List*, expand *Zones*.
4. Add a new entry for "External."
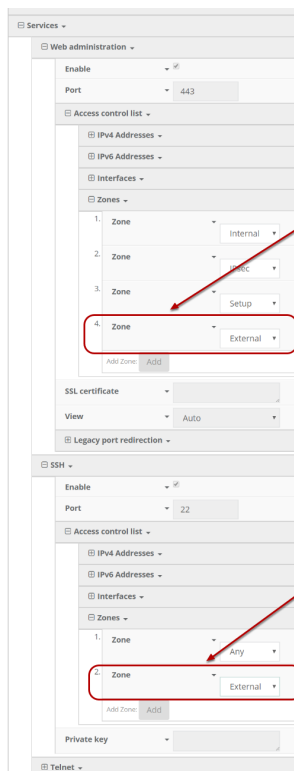

Once the configuration has been updated, click the *Terminal on Unit* hyperlink available from the *Device Details* screen.
