

Product Change Notification: XBee/XBee-PRO 802.15.4 Firmware Update

Overview of Change

The XBee/XBee-PRO 802.15.4 module production firmware has changed from 1084 to 10E6 in manufacturing. New revisions will be in stock and begin shipping as early as October 16, 2009. By November 1, 2009 all inventory will be the new revision.

Details:

- In its default state, firmware 10E6 is backward-compatible with previous firmware versions. 10E6 adds bug fixes and new features to 1084; the main new feature offered is over-the-air configuration of parameters and settings. If you enable the new features on 10E6, these features will not work in a network of devices with older firmware versions. See firmware revision history for details.
- For customers who wish to begin working with the new firmware, it is available immediately for download by using X-CTU > Modem Configuration tab > Download new versions... button > Web.
- More details can be found on our Support site at <http://www.digi.com/support/productdetl.jsp?pid=3257&osvid=0&s=268&tp=2>, including:
 - Firmware revision history
 - Firmware download
 - Instructions for downloading and installing new firmware

See page 2 of this PCN for a sample XBee label and how to find the Revision and other relevant information.
