

README

SX Frequency Calibration Repair Profiles

These profiles are designed to be loaded onto SX modules to repair frequency miscalibration.

Usage

To repair a module with a miscalibrated frequency, load the appropriate profile using the XBee Multi Programmer, XCTU, or a similar tool. The profile contains settings that, when applied, will repair the frequency offset if needed. Once this profile has been loaded, a profile containing a standard released firmware version should be loaded to restore the module for normal use.

Version history

This is version 1.0

- v1.0: Initial Release
