

1 Verify kit contents

Quick Start Guide

Digi Connect® Wi-Wave

90000795_B

2 Install software

- Insert the CD and find the installer for your operating system in the folder `/installers/<os>/`
- Run the executable to install the Digi Connect® Wi-Wave software and documentation on your host PC

3 Connect hardware to development board

- Connect USB cable
- Choose appropriate antenna type and connect
- Add the appropriate plug and connect power supply

4 What's next?

- Refer to the User's Manual PDF in the CD folder `/docs/software/<os>/` or in the installation folder for further instructions about enabling and using the Digi Connect® Wi-Wave on your operating system
- In Windows systems, the software is installed by default at `C:\Program Files\Digi\AppKits\WiWave\` and a start menu entry is created in `Programs > Digi > Digi Connect Wi-Wave`
In Linux systems, the software is installed by default at your home folder `/home/username/wi-wave` (the user may change the path during installation)
- Additional hardware documentation like Schematics and the Hardware Reference Manual can be found in the installation folder and also on the CD
