

DataFire[®] PTE Series

Daughter Card for

DataFire PT1

DataFire PE1

Hardware Installation

Introduction

You can activate the second port on your DataFire PT1 or PE1 adapter by adding a daughter card. This guide provides instructions for installing the daughter card on both PCI and CompactPCI (cPCI) adapters.

Parts List

- DataFire PTE series daughter card
- Spacers (4)
- Screws (8)
- Wrist strap for static protection

Installation

1. If your DataFire adapter is currently installed in your system, follow the normal procedure to prepare your system for hardware removal or exchange.
2. Put on the wrist strap (included with the adapter) and attach it to the system chassis.

Caution! For ESD protection, do not touch the DataFire adapter or the daughter card until you have grounded yourself to the system chassis.

3. Remove the DataFire adapter from the system (if installed).
4. Remove the daughter card from its ESD protective packaging.
5. Using the screws provided, attach the four spacers to the DataFire adapter, on the side with the connector, as shown in the diagrams in this guide. *Be sure to install the spacers on the plated through-holes.*
6. Plug the daughter card onto the DataFire adapter (see diagrams). The spacers should line up with the plated through-holes on the daughter card.
7. Secure the daughter card to the adapter with the remaining four screws.
8. Install the adapter in your computer or store it in a static dissipating sleeve for ESD protection before removing the wrist strap.
